EDITORIAL

In functional terms BRICK is the best eight foot boat available anywhere. She is an excellent sailor, easy to build and roomy. In addition, with two load water lines, one at 475 lbs. the other 875! lbs., she can carry more than any other boat her size.

BRICK makes an excellent family fun boat, fishing platform, cartopper and dinghy. She can sailed, motored and rowed. With her ability to hold four large adults and a big dog in comfort, and sail in 20 m.p.h.+ winds with accompanying chop, she never ceases to amaze her owners and those who come in contact with her.

With this much ability it is almost too much to ask that BRICK be easy to build, yet she is. Anybody who can build a box can build BRICK, many build her to gain confidence for larger projects, and get a great boat in the process.

For me it is a great comfort to know that, in this complicated age, the simplest and easiest to build can also be the best, in BRICKS case by a wide margin.
