### Dear Fellow Sailor

K-Z Boats is proud to present the following information on the **Bull 7000**.

The **Bull 7000** is a departure from a “hang-on and go quick dingy with a lid”. The **Bull** brings you not only Performance Plus, but also cruisability for four adults. Designer Greg Young has put major emphasis on hull form stability and efficient deck layout, coupled with a manageable sail plan of 301 square feet (main and fore triangle).

The mast section is deep fore and aft and very stiff to keep the large roach in check. Below the water line the **Bull** is held stable by the use of 826 pounds of ballast with a vertically retractable centerboard / torpedo bulb configuration. One of the unique features of the **Bull 7000** is it's retractable and pivoting bowsprit. The bowsprit, with the use of the patented horns, allows the pole to be rotated 60 degrees either side of centerline. This allows almost flat running.

The standard sail inventory consists of a fully battened mainsail, No. 1 and No. 2 headsails and No. 2 fractionally rigged asymmetrical spinnaker. All working sails are cut from North Sails diax mylar cloth. In addition to the standard package, a No. 1 masthead spinnaker and a lightweight mylar drifter are also available. All sails are cut by John Clinton of 1992 America 3 fame.

There are sleeping arrangements for four, two in single vee berths forward (which convert to a double) plus the highlight, a queen-sized double underneath the bridge deck. This berth offers sleeping comfort and privacy unequaled on any boat this size. Twin hatchways play a key role in how the interior layout functions. The galley, boasting sink, a good size work area and a separate two-burner stove, is cleverly positioned below the starboard hatch.

The cruising features continue on deck. The outboard motor is fitted to a special bracket that swings the motor easily over the transom and into its' own locker under the cockpit seat, out of the way and out of sight, with the weight moved forward and low. There is also an anchor well with a molded fairlead and a cleat set under the deck. Safety is enhanced with an enclosed transom, molded toe-rail, stanchions and life-lines. There are small built-in transom steps to help board the boat.

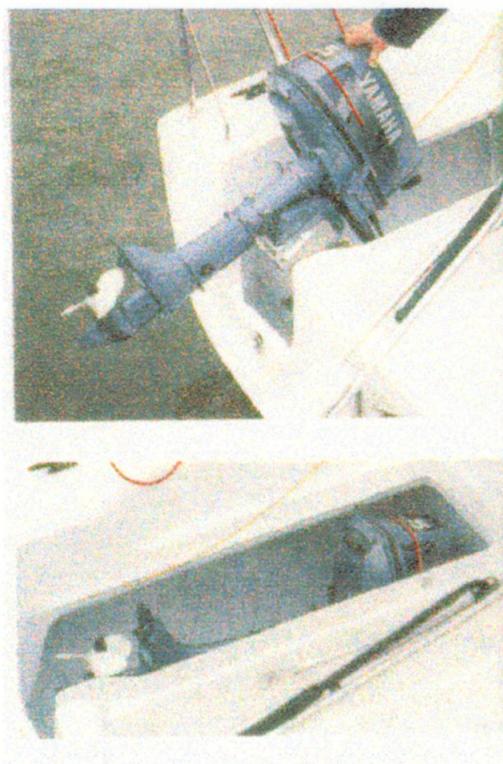

The **Bull 7000** offers a great deal more than just exciting performance, and for that reason , is sure to have appeal amongst a broad spectrum of sailors.

For more details, price and availability please contact K-Z Boats.
