

CAPE DORY "28"

NEW DESIGN
By CARL ALBERG

FULL POWERED DIESEL
CRUISING AUXILIARY

CAPE DORY YACHTS

INTRODUCTION

Cape Dory Yachts now introduces a **new** exciting cruising auxiliary — The Cape Dory "28". Her immediate beauty comes from the drawing board of the famous naval architect, Mr. Carl Alberg. The Cape Dory "28" is his latest design and concept to meet the demand of the modern cruising sailor.

To meet this demand, the Cape Dory "28" offers a rugged, beautifully balanced boat. Her full keel provides stability, seaworthiness and ease of handling appreciated under all sailing conditions. Sail handling is minimized by the use of a self tending jib boom, and jiffy reefing on the mainsail. A large in-board diesel engine, with 26 gallon capacity assures full hull speed against adverse conditions. Add 32 gallons of water in two separate tanks, and picture the flexibility in her cruising schedule.

Below deck reveals a layout that is simple, practical and comfortable. A private forward cabin with two berths and ample storage. Immediately aft is a head, sink and hanging locker completely private of the two cabins. Main cabin provides an extension settee berth to port with a pilot berth above. A drop leaf

table is mounted on the large cabin sole, surrounded by 6'2" headroom. Finally, a truly workable aft galley arrangement. The sink and large fully insulated ice box are to starboard. A two burner gimbaled alcohol stove is located to port. Both areas surrounded by bins and storage. Add to all this, excellent light and ventilation; two large cabin top hatches and eight opening ports.

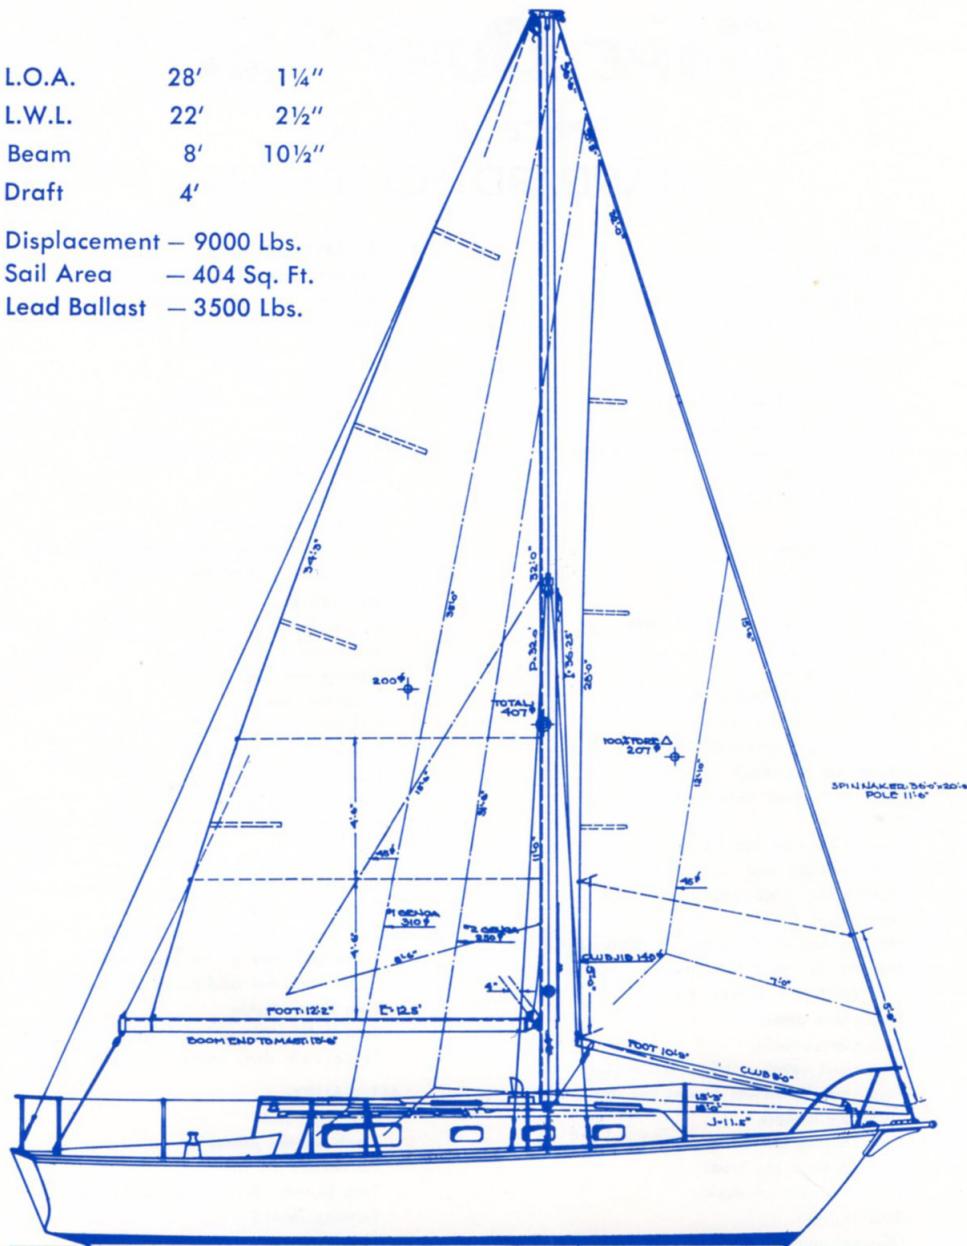

Standard equipment reflects the thought of providing a complete sailing package. As an example, a plow anchor is set in a roller chock off the bow to insure safety and security when anchoring.

In summary, the Cape Dory "28" radiates high quality finish of both fiberglass and teak joiner work. The soundness of construction and attention to detail are evidence of Cape Dory Yachts fine craftsmanship. The Cape Dory "28" adds up to lasting value!

L.O.A. 28' 1 1/4"
L.W.L. 22' 2 1/2"
Beam 8' 10 1/2"
Draft 4'

Displacement - 9000 Lbs.
Sail Area - 404 Sq. Ft.
Lead Ballast - 3500 Lbs.
