The new

ERICSON/23

The Ericson/23 is a new sailing yacht with all of the features that have made the larger Ericsons so famous.

She's an authentic design by naval architect Bruce King. So you know *all* aspects of her design have been thoroughly considered. She does not emphasize one feature or characteristic at the expense of another.

She's conceived to be an exceptionally good, all-around sailing craft, easy to handle, stiff in a breeze, sensitive to light airs, and fast both beating and running.

Below, she makes use of her interior space in typical Ericson fashion—a rare blend of beauty, comfort, and efficiency.

And not the least of her virtues is her high quality construction, using the same techniques, materials, and standards that are applied to the largest Ericsons.

The Ericson/23 is available in a choice of underbodies: fixed keel and keel-centerboard. Both are internally ballasted with lead, which is cast to fit the contours of the hull to keep the center of gravity at the lowest possible point. Trailers for transport and dry storage are offered for both versions, as is a one-man system for raising and lowering the mast.

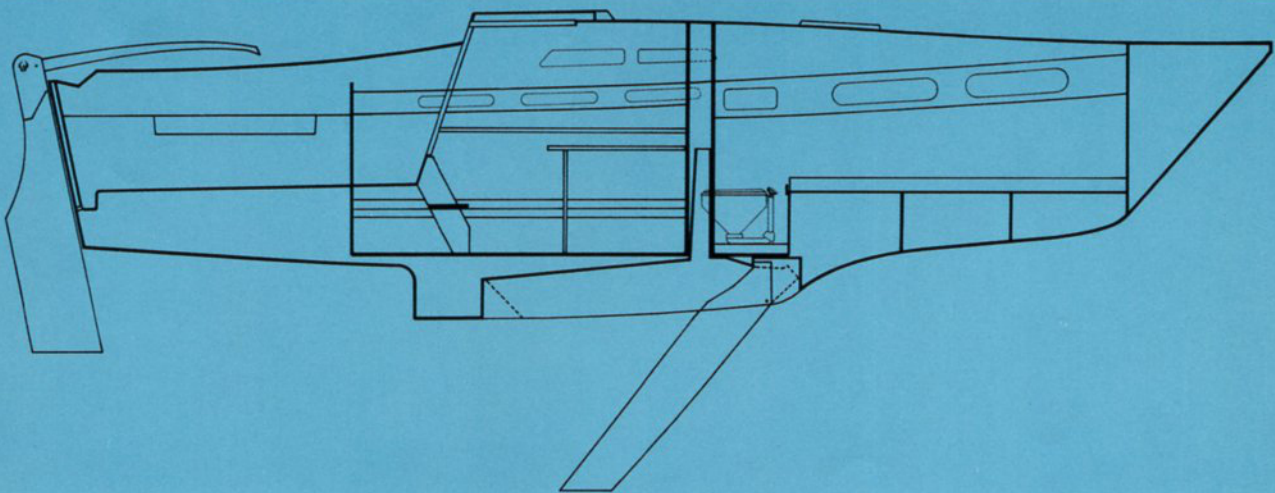

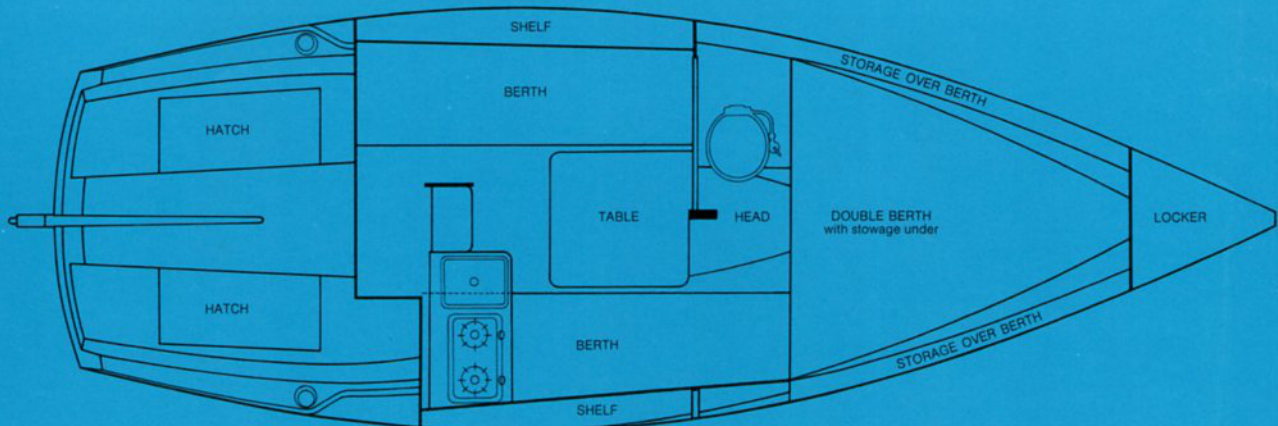

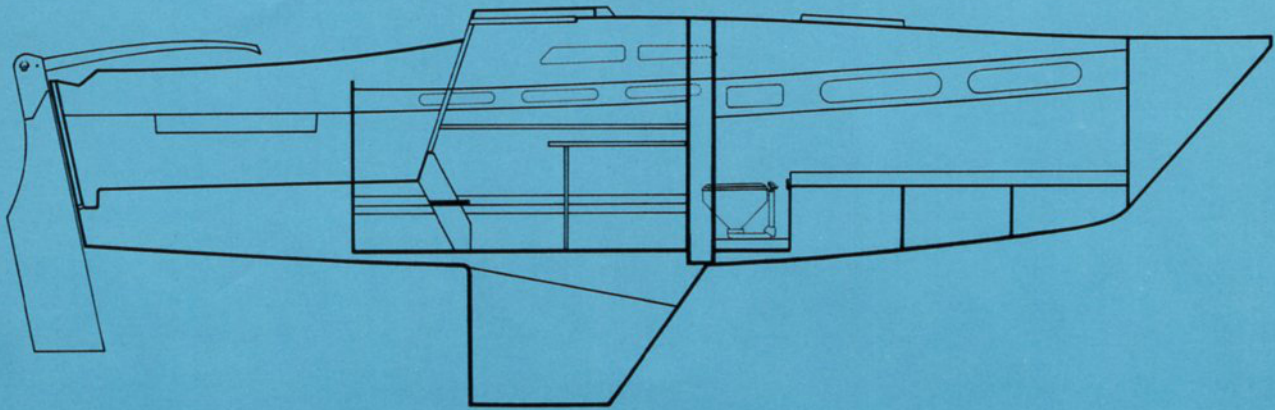

If you love sailing and the world of pleasure and satisfaction it opens to you, don't short-change yourself. Give yourself an Ericson/23.
