

Excalibur

THE EXCALIBUR 26

was conceived and designed for competitive high performance sailing. A product of computer technology, her proven hull is built to stand the stress and strain of racing with ease. Even with the sleek racing hull design, **THE EXCALIBUR 26** accommodates her crew with the luxury of a much larger cruising ship.

CONSTRUCTION

The hull of **THE EXCALIBUR 26** is a one piece hand-laminated unit constructed of fiberglass cloth, matting and woven roving: each used to meet a specific stress factor. When the single unit lead ballast is added, it is glassed over to become an integral structural member. The hull interior is finished with a layer of glass cloth and then painted, thus providing a smooth, easy to maintain surface. The sandwich style construction is another outstanding feature of **THE EXCALIBUR 26**, producing maximum strength and rigidity with minimum weight, plus forming a natural insulator for temperature and sound. A structurally strong and weather tight union between the hull and deck is produced by bolting the two together and then glassing over the entire bond. The deck hardware is thru bolted and sealed. The exterior teak trim is in accord with the easy to maintain fiberglass yacht tradition.

When you, as a skipper, take the helm of **THE EXCALIBUR 26** you will know you have been introduced to a future filled with the pleasures of sailing and dependability through construction.

THE EXCALIBUR 26

interior is constructed with the highest quality materials and the finest of craftsmanship for your sailing comfort.

There is an enclosed head area, stainless steel sink with pump, 2 burner alcohol stove with cover and four full length single berths. The foambacked white vinyl head liner accented with mohogany interior and teak trim, plus plush nylon carpeted floor make **THE EXCALIBUR 26** a ship of unequaled luxury in it's class.

STANDARD EQUIPMENT LIST

1. Molded fiberglass hull and deck with non-skid surface.
