THE 1990 HUNTER 18.5 AND 23

These special features and benefits make the Hunter of your choice a decision you'll be comfortable with.

FRACTIONAL SWEPT BACK RIG:

- \* Smaller headsail is easier to handle
- \* Easier walkaround deck with single chain plates
- \* Easier and quicker tacking for upwind sailing

SKYLIGHTS:

- \* Gives you a cheery and bright interior

BULB WING KEEL:

- \* The wings provide more lift when sailing to weather and allows the shallower draft keel to perform like the deeper fin keel
- \* The wings dampen pitching of the boat
- \* The bulb lowers the center of gravity and means you can carry more sail area

THE FEELING OF BIGNESS BELOW:

- \* Hunters are bigger for their length, with more beam, freeboard, transom beam, and longer waterline, giving you more volume below. They feel roomier because they are roomier below.

CRUISE PAC:

- \* The most complete accessory and marine hardware package in the industry
- \* Hunter's buying power saves your money on those "normally an option" items

RESALE VALUE:

- \* These popular up-to-date designs with the new innovative features will still be in style 5 years from now when you want to sell
- \* Hunter's low depreciation factor has already been established and proven

HULL DESIGN:

- \* Hunters design team headed by Warren Luhrs ( an avid single handed sailor and third generation boat builder) are way ahead of the competition. They give you a fast, strong, sea kindly hull with excellent handling characteristics
- \* Hunter designs are big for their length. It would take a longer boat to equal Hunter's volume below
- \* You will save on anything that charges by the foot (slip fees, haul-outs, etc)

QUALITY ENGINEERING AND EQUIPMENT:

- \* Hunter is known for their superior engineering ability and production techniques
- \* They use top quality hardware and equipment
- \* Hunter is out front because the quality is in the design, engineering, tooling, manufacturing, assembly, finish work, and the performance of the boat. It's all designed in !

NEW MODELS:

- \* Hunter Marine's philosophy is to build the most innovative boats they can produce. They make the most changes in your behalf. They will not build the same old design year after year when they know they can do better
- \* Hunter is committed to continue to improve in the years ahead.

NOW LET'S GO SAILING !!

See and feel for yourself the difference these innovative features make. Call now for your test sail. We have these boats available to sail.
