

***The New
Olympic
Watersport***

Laser  [®]

Laser racing has been chosen as a new Olympic watersport for 1996! The selection affirms what sailors already know. The Laser is the only choice for keen competition and raging good fun. Whether racing around the buoys or skimming across the water with only the sounds of spray and waves off the bow, Laser can take you there. Enjoyment of your Laser is limited only by your imagination and will to live life to the fullest.

When your need for challenge beckons, there are thousands of events to try in over 85 countries. Owning a Laser admits you to the most active social and competitive sailing schedule in the world. You'll meet new friends and probably see old ones. The fun on-shore is only matched by the thrill of tight competition on the water. Laser is a unique class. Everyone is required to sail with identical equipment so that the competition is a true test of each sailor's skill.

Laser is the world's premier sailboat class. It's design is unparalleled. The flat unobstructed deck area is great for blasting around with a friend and the hull is quick to plane, but amazingly stable for its exceptional performance. People are flocking to the Laser because of its great performance, simplicity and ease of handling. The variety of activities and events worldwide create unbeatable value.

The International Yacht Racing Union, the world governing body of sailing, recognizes the Laser as one of the few International Classes, and has selected the Laser as it's World Youth Championship singlehanded class through 1997! In North America, both US SAILING and the Canadian Yachting Association have picked the Laser for their national Youth Championships. The Laser Class also has the pioneering Masters circuit for those over 35.

The fun of Laser sailing lasts a lifetime.

Laser Features

Formula Laser

Choose from three sail/rig sizes for various weights and skills. Only the lower spar and sail are different. The three are:

Sail/Rig	Sail Area	Suggested Racer Weight
Laser 4.7	51 sq. ft.	80-120 lbs.
Laser Radial	62 sq. ft.	110-150 lbs.
Laser	76 sq. ft.	140+ lbs.
