International MOTH

The new International MOTH, designed by Herb Stewart, and produced by HMS Marine, Inc., is all fiberglass, lined with 3/8" polyurethane foam. Extremely light, (96 pounds) carrying 85 square feet of sail, she is one of the most exciting boats in the water today. The MOTH is reasonably stable even with the high ratio of sail to weight due to her beam of 4' 8". Overall length of 11' makes her easily cartopped. Equipment included in the introductory sailaway price, \$695.00, is the Boom Vang, Cunningham Reef, Mainsheet Jamb Cleat, Fully Battened Mainsail and Tapered Needlespar Mast and Boom.

Be one of the first to race the International MOTH on the West Coast. Over 4000 boats in the water now - 60 boats started in the Nationals in New Jersey in 1971 without a single entry from California.
