Catamaran Racing.

There is an exhilarating purity and efficiency about it. You are driving to windward faster than the wind and there's only one thing out of control... your grin.

The Five Point Two is the newest technical achievement by Tom Roland. Here he has combined his race proven concepts of the Alpha Cat and the 36' NACRA Cat into the most irresistible dig in and go catamaran available. Its design is the uncompromised result of function — this is not styling, but it is clear that Roland has designed yet another classic of functional beauty. Thus in the high performance multi-hull arena, the Five Point Two will be the machine to watch.

It is an optimized marriage of rig and hull. The revolutionary hull shape penetrates the widest range of wave and chop forms with increased performance. The Five Point Two is a balanced totality of light wind grace, and driving forward in a blow it's more like a swallow than a squirrel.

The cut of the sail is a precision match to the new hull shape and it is crafted by one of America's most famous sailmakers of properly reinforced high grade dacron. This union results in superb high speed balance and control without sacrificing calm wind sensitivity. The combination allows you to accept that last ounce of pull in the widest range of wind conditions.

What's the hardest thing about owning a Five Point Two?...wiping off the grin. Which brings us to the price. Like we said, Tom didn't compromise. You might look at it as an investment in a grin.

When you feel that you're ready, strap on a Five Point Two and prove to yourself that you're as good as you are.
