

Pacific Seacraft

Pacific Seacraft

SAILING is a great American tradition. From the magnificent Yankee Clipper ships to the small work boats that sailed from fishing ports all around the U.S. coastline, we have always been a nation of sea goers.

Today experienced sailors and would be cruising families are expressing great interest in small sturdy sailing craft that are built to the traditional lines seen in the great days of sail.

Double Enders have always been popular with seagoing men. While they have been built as custom yachts for many years in Europe, their major use in the U.S. has been as commercial fishing craft. Now American pleasure boating enthusiasts are rediscovering the fine qualities which have made the Double Ender so popular with professional sailors.

The Pacific Seacraft 25 is such a yacht. She incorporates the latest technology, yet is evolved from the classic lines of New England fishing vessels of the last century...a fine, fast sailor in light airs yet a strong, safe small ship in a heavy blow.

QUALITY inside and out. The hallmark of traditional American made sailing craft is most apparent on the Pacific Seacraft 25.

Below deck you'll find a warm and comfortable salon. Loaded with fine teak joiner work and upholstered in long wearing designer fabric, she is a haven during rough weather; a roomy, comfortable place to enjoy when at anchor or in port. Small details of interior finish, such as solid brass locker hardware,

add to the feeling of livable luxury.

On deck the feeling of tradition is carried through with oiled teak cap rails, grab rails, a beautiful oak tiller and white ash rudder cheeks. All cleats, winches, hinges, hasps, gudgeons and pintles are solid Bronze, as are the headstay fitting and all through-hull fittings.

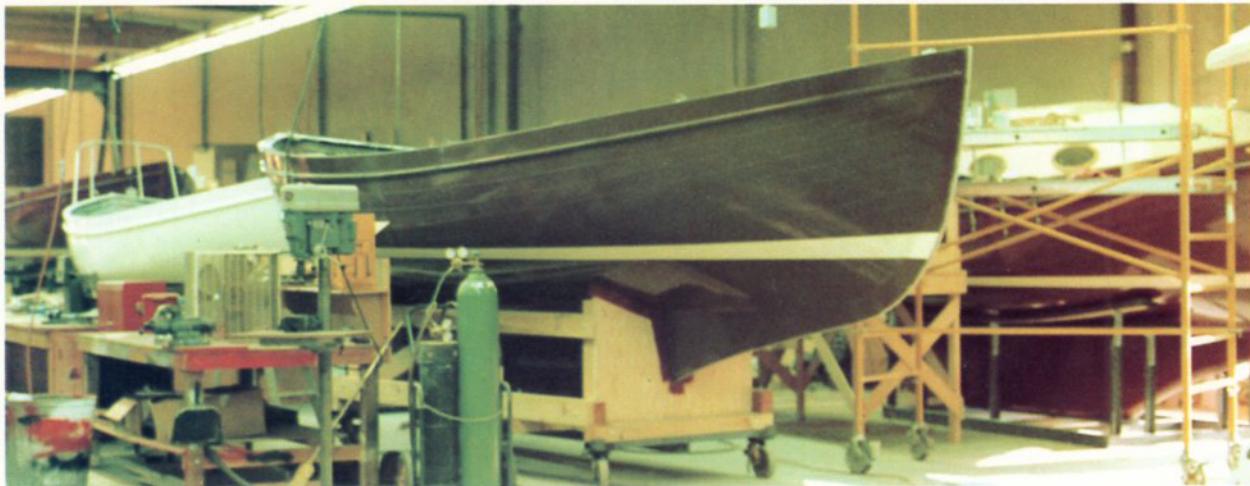

It is this dedicated attention to traditional quality and detail that makes the Pacific Seacraft 25 unique in a world of production boatbuilding.

Pacific Seacraft

We welcome your inspection from stem to stern, bilges to mast head. You'll see that QUALITY and RELIABILITY have been our prime considerations throughout...even to the smallest details.

The Pacific Seacraft plant is located in Santa Ana, California. Here dedicated craftsmen with years of yachtbuilding experience use their skills in conjunction with the most modern facility, equipment, and materials to create the finest small sailing yacht available in America. We welcome your visit at any time.
