

SAIL PLANS

This sail plan calls for a 55 square foot sprit rig. For the boat with the thwarts at 90" and 50" shown above, the mast is stepped at the foot of the bow stem like a cat boat. The center board trunk is built between the two thwarts. The simplest construction is to first complete the hull and then build the center board trunk and cut the slot in the hull bottom with a skill saw.

Sprit Sail
