

MANUFACTURER'S COMMENT

This very affordable performance design from the drawing board of the world-class naval architect Philippe Briand is a definitive study of how to excel in all areas of accommodation, aesthetics, and performance in one package! The European genius of incorporating modern design features such as aft cabins and ergonomically correct cockpits and the sheer ability to use available space well is manifested "beautifully" in the YACHTING FRANCE 27. She serves as a superb introduction to the YACHTING FRANCE family of racing and cruising auxiliaries that include such noted yachts as the new S&S-designed Lacoste 42 and the MS series of performance motorsailers, 33'-43' LOA.

The YACHTING FRANCE 27 delivers modern cruising accommodations along with excellent performance. The first can be seen in the accompanying layout. The second: Philippe Briand's name is synonymous with race-course successes. Good builders know that all sailors appreciate good performance. Using the best naval architects insures it!

Chantiers Yachting France, located near Bordeaux on the Bay of Biscay, is a yacht manufacturer highly regarded for excellence in engineering and systems installation as well as fiberglass construction techniques. Other divisions of the YACHTING FRANCE group build such diversified and technologically advanced products such as submarines, commercial craft, and military patrol boats up to 92' LOA! This unusual depth of engineering, design, and production expertise translates into real capabilities not normally available to other yacht manufacturers. Combined with her very attractive pricing, the YACHTING FRANCE 27 offers an exceptional value in today's marketplace.

The YACHTING FRANCE 27 is completely equipped with such essentials as sails as well as Lewmar self-tailing winches. There is much, much more, of course. Contact us for her extensive specification sheet and the name of your nearest YACHTING FRANCE dealer!
